IGDCR Workshop
System Topologies

The Value for You

- Comprehensive information about important system topologies and their business drivers
- Gives background with regards to the technical realization, especially in mixed landscapes.
- You have business in many countries with separate or mixed IT systems
- You want to understand the importance of the best selection of your system topology (single box / distributed IT, …) and the corresponding business drivers) for your (global) system landscape and need to get the complete picture of the challenges of the technical realization

Session Features

- System topologies and their business drivers
- Best business practices and feasibility studies
- Technical realization – especially in mixed environments

Prerequisites

The participants should preferably have the following background:

- Experience in IT projects
- General knowledge of IT products
- General knowledge of own business needs

Price

Must be determined individually depending on business situation and delivery model: Onsite or virtual (webinar), experience of team and other factors

Order / contact:
