

[Heinrich Wilking | LinkedIn](#)

My focus area is Risk & Compliance Management, where I advise companies in these areas. My professional career is characterized as a consultant for Risk & Compliance Management, preferably for companies with SAP. I help to integrate compliance processes into operational business processes through automation based on industry or legal regulations and thus digitize them. I have specialized in how technologies such as machine learning can be used to make internal controls effective. Recently, Heinrich's focus has been on the use of Web 3, cryptocurrencies, blockchain and metaverse. And how new business models such as DeFi or DAO can be integrated securely, reliably and compliantly with existing processes and IT systems, preferably SAP. Heinrich's many years of Identity & Access Governance and Data Privacy experience are of particular importance in the integration of Web 3 & Metaverse into the existing structures of companies.
